| 1                         | If attending post-secondary school or military recruits who will be living in a congregate setting.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 2                         | A catch-up program in the 3 <sup>rd</sup> year of high-school evaluates student's vaccination history. Students will be provided any missed vaccination to protect against the following diseases: diphtheria, pertussis, tetanus, polio, measles, mumps, rubella, varicella, meningococcal serogroup C infections, hepatitis A and B, and human papilloma virus. Temporary catch-up schedule: children in the fourth year of primary school will be vaccinated against hepatitis A.                                                                                                                                                                                                                                                                                             |
| 3                         | DTaP-IPV-Hib may be substituted for DTaP-IPV in times of shortage for those who are 4-6yrs of age.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 4                         | There are two rotavirus vaccines authorized in Canada: Rotarix (2 doses) and RotaTeq (3 doses).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|                           | Vaccine is not publicly funded in this province/territory.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|                           | <u>A specific catch-up program is currently underway.</u> A catch-up program is defined as a time-limited measure to implement a new vaccine program to a certain age cohort (e.g. an additional dose of a vaccine is recommended and a targeted program is put in place). It can also be used when a vaccine is added at a younger age (e.g. in infancy) and the existing program continues until that infancy age cohort “catches up” to the current age cohort (e.g. hepatitis b vaccine is added to the infancy program, but the school immunization program continues until those infants reach school aged immunization). With that said, a province or territory can still provide catch-up vaccine at the individual level even if there’s no specific program in place. |
